

Aim: Using DataInputStream in Programs.

1. Write a java program to reverse the digits of a number. Number is passed using the method.

CODE:

```
import java.util.Scanner;
class ReverseNumber{
    Scanner s = new Scanner(System.in);
    int n;
    int arr[];
    ReverseNumber(int x){
        n = x;
        arr = new int[n];
        System.out.print("Enter the element:");
        for(int i=0;i<n;i++){
            arr[i] = s.nextInt();
        }
    }
    void display(){
        System.out.println("Numbers in reverse order:");
        for(int i=n-1;i>=0;i--){
            System.out.print(arr[i]+" ");
        }
    }
}
public class Reverse{
    public static void main(String args[]){
        Scanner s = new Scanner(System.in);
        System.out.print("Enter the number of element you want in an array:");
        int num = s.nextInt();
        ReverseNumber r = new ReverseNumber(num);
        r.display();
    }
}
```

OUTPUT:

Enter the number of element you want in an array:5

Enter the element:1 2 3 4 5

Numbers in reverse order:

5 4 3 2 1

2. Write a java program for reading the data from the keyboard. (using DataInputStream).

CODE:

```
import java.io.DataInputStream;
import java.io.IOException;
public class DataInput{
    public static void main(String[] args) throws IOException {
        DataInputStream d = new DataInputStream(System.in);
        System.out.print("Enter your name:");
        String name = d.readLine();
        System.out.print("Enter your age:");
```

```
        int age = Integer.parseInt(d.readLine());
        System.out.println("Name:" + name);
        System.out.println("Age:" + age);
    }
}
```

OUTPUT:

Enter your name:Atomic
Enter your age:18
Name:Atomic
Age:18

3.Accept n strings. Sort names in ascending order.**CODE:**

```
import java.io.DataInputStream;

public class Str {
    public static void main(String args[]) throws Exception {
        DataInputStream d = new DataInputStream(System.in);
        int n;
        System.out.print("Enter the number of strings you want to add: ");
        n = Integer.parseInt(d.readLine());
        String[] sr = new String[n];
        System.out.println("Enter strings:");
        for (int i = 0; i < n; i++) {
            sr[i] = d.readLine();
        }
        for (int i = 0; i < n; i++) {
            for (int j = 0; j < n - i - 1; j++) {
                if (sr[j].compareToIgnoreCase(sr[j + 1]) > 0) {
                    String t = sr[j];
                    sr[j] = sr[j + 1];
                    sr[j + 1] = t;
                }
            }
        }
        System.out.print("Strings in sorted order:");
        for (int i = 0; i < n; i++) {
            System.out.print(sr[i] + " ");
        }
    }
}
```

OUTPUT:

Enter the number of strings you want to add: 5
Enter strings:
Aditya
Jay
Zameer
Aayush
Rohit
Strings in sorted order:Aayush Aditya Jay Rohit Zameer
