

Aim: Write PHP scripts.

1.Retrieving data from HTML forms.

CODE:

HTML CODE:

```
<!DOCTYPE html>
<html>
<head>
  <title>User Info Forum</title>
</head>
<body>
  <center>
    <form method="post" action="register.php">
      <table border="2" cellpadding="5" cellspacing="0">
        <tr>
          <td>Name</td>
          <td><input type="text" name="txtname" required></td>
        </tr>
        <tr>
          <td>Age</td>
          <td><input type="number" name="txtage" required></td>
        </tr>
        <tr>
          <td>Email Id</td>
          <td><input type="email" name="txtemail" required></td>
        </tr>
        <tr>
          <td>Password</td>
          <td><input type="password" name="txtpass" required></td>
        </tr>
        <tr>
          <td>Gender</td>
          <td>
            <input type="radio" name="gender" value="male" required>Male
            <input type="radio" name="gender" value="female" required>Female
          </td>
        </tr>
        <tr>
          <td>Qualification</td>
          <td>
            <select name="qua" required>
              <option value="">Choose...</option>
              <option value="ssc">SSC</option>
              <option value="hsc">HSC</option>
              <option value="graduate">Graduate</option>
              <option value="postgrad">Post Graduate</option>
              <option value="phd">PhD</option>
            </select>
          </td>
        </tr>
      </table>
    </form>
  </center>
</body>
</html>
```

```
</tr>
<tr>
  <td>Address</td>
  <td><textarea rows="4" cols="40" name="adds" required></textarea></td>
</tr>
<tr>
  <td colspan="2" align="center">
    <input type="submit" value="Submit">
    <input type="reset" value="Reset">
  </td>
</tr>
</tr>
</table>
</form>
</body>
</center>
</html>
```

PHP CODE:

```
<!DOCTYPE html>
<html>
<body>
<?php
  $name = $_POST["txtname"];
  $age = $_POST["txtage"];
  $email = $_POST["txtemail"];
  $pass = $_POST["txtpass"];
  $gen = $_POST["gender"];
  $qua = $_POST["qua"];
  $add = $_POST["adds"];

  echo "Name: " . $name . "<br>";
  echo "Age: " . $age . "<br>";
  echo "Email: " . $email . "<br>";
  echo "Password: " . $pass . "<br>";
  echo "Gender: " . $gen . "<br>";
  echo "Qualification: " . $qua . "<br>";
  echo "Address: " . $add . "<br>";
?>
</body>
</html>
```

OUTPUT:**Index of /practical-8**

Name	Last modified	Size	Description
 Parent Directory		-	
 Practical-8-A.html	2025-09-21 11:28	2.2K	
 register.php	2025-09-21 11:28	493	

Apache/2.4.58 (Win64) OpenSSL/3.1.3 PHP/8.2.12 Server at localhost Port 80

Name	Mr Atomic
Age	19

Submit Reset	

Name: Mr.Atomic
Age: 19
Email: atomicgaming@gmail.com
Password: Atomic@7878
Gender: male
Qualification: graduate
Address: Shadow Garden

2.Performing certain mathematical operations such as:

i.Calculating factorial.

HTML CODE:

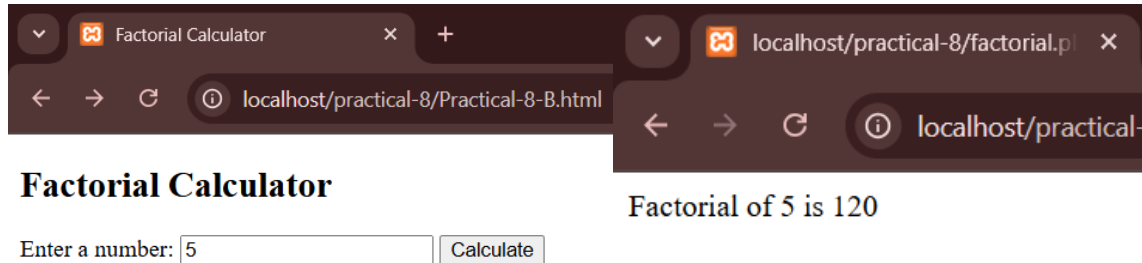

```
<!DOCTYPE html>
<html>
<head>
  <title>Factorial Calculator</title>
</head>
<body>
  <h2>Factorial Calculator</h2>
  <form action="factorial.php" method="post">
    Enter a number: <input type="number" name="number" required>
    <input type="submit" value="Calculate">
  </form>
</body>
</html>
```

PHP CODE:

```
<!DOCTYPE html>
<html>
<body>
<?php
  $num = $_POST["number"];

  function factorial($n){
    if ($n == 0 || $n == 1){
      return 1;
    }
    else{
      return $n * factorial($n - 1);
    }
  }
}
```

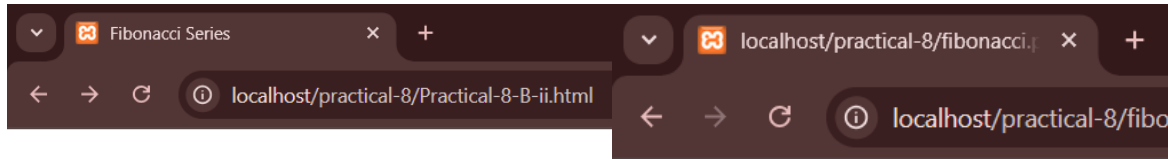

```
    echo "Factorial of $num is " . factorial($num);  
?>  
</body>  
</html>
```

OUTPUT:**ii.Finding Fibonacci Series.****HTML CODE:**

```
<!DOCTYPE html>  
<html>  
<head>  
    <title>Fibonacci Series</title>  
</head>  
<body>  
    <h2>Fibonacci Series Calculator</h2>  
    <form action="fibonacci.php" method="post">  
        Enter number of terms: <input type="number" name="terms" required>  
        <input type="submit" value="Generate">  
    </form>  
</body>  
</html>
```

PHP CODE:

```
<!DOCTYPE html>  
<html>  
<body>  
<?php  
    $terms = $_POST["terms"];  
    $a = 0; $b = 1;  
    echo "Fibonacci series: ";  
  
    for ($i = 0; $i < $terms; $i++){  
        echo $a . " ";  
        $next = $a + $b;  
        $a = $b;  
        $b = $next;  
    }  
?>  
</body>  
</html>
```

OUTPUT:**Fibonacci Series Calculator**

Fibonacci series: 0 1 1 2 3

Enter number of terms: **iii.Displaying Prime Numbers in a given range.****HTML CODE:**

```
<!DOCTYPE html>
<html>
<head>
  <title>Prime Numbers</title>
</head>
<body>
  <h2>Prime Numbers in a Range</h2>
  <form action="prime.php" method="post">
    Enter start: <input type="number" name="start" required><br>
    Enter end: <input type="number" name="end" required><br>
    <input type="submit" value="Display Primes">
  </form>
</body>
</html>
```

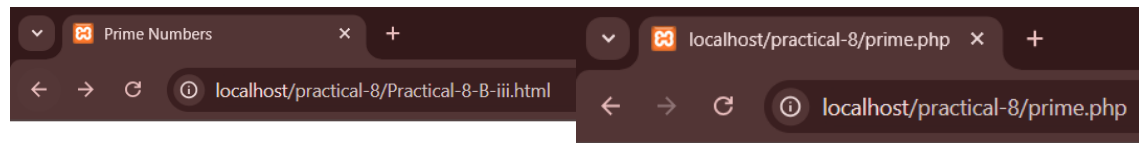

PHP CODE:

```
<!DOCTYPE html>
<html>
<body>
<?php
  $start = $_POST["start"];
  $end = $_POST["end"];

  echo "Prime numbers between $start and $end: ";

  for($num = $start; $num <= $end; $num++){
    if($num < 2) continue;
    for($i = 2; $i < $num; $i++){
      if($num % $i == 0){
        break;
      }
    }
    if($i == $num){
      echo $num . " ";
    }
  }
?>
</body>
```

</html>

OUTPUT:**Prime Numbers in a Range**

Prime numbers between 1 and 10: 2 3 5 7

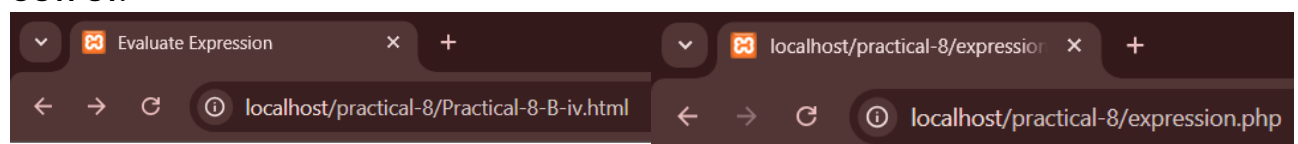

Enter start:
Enter end:

iv. Evaluating Expressions.**HTML CODE:**

```
<!DOCTYPE html>
<html>
<head>
  <title>Evaluate Expression</title>
</head>
<body>
  <h2>Evaluate Expression</h2>
  <form action="expression.php" method="post">Enter expression:
    <input type="text" name="expr" required>
    <input type="submit" value="Evaluate">
  </form>
</body>
</html>
```

PHP CODE:

```
<!DOCTYPE html>
<html>
<body>
<?php
  $expr = $_POST["expr"];
  $result = eval("return $expr;");
  echo "Result of $expr = " . $result;
?>
</body>
</html>
```

OUTPUT:**Evaluate Expression**

Result of (9.5/55)+(4*6) = 24.1727272727

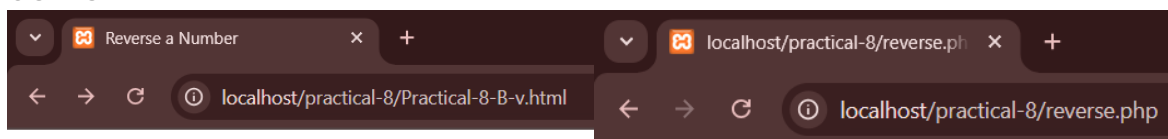

Enter expression:

v.Calculating reverse of a number.**HTML CODE:**

```
<!DOCTYPE html>
<html>
<head>
  <title>Reverse a Number</title>
</head>
<body>
  <h2>Reverse a Number</h2>
  <form action="reverse.php" method="post">
    Enter a number: <input type="number" name="num" required>
    <input type="submit" value="Reverse">
  </form>
</body>
</html>
```

PHP CODE:

```
<!DOCTYPE html>
<html>
<body>
<?php
  $num = $_POST["num"];
  $rev = 0;
  while($num > 0){
    $rev = ($rev * 10) + ($num % 10);
    $num = (int)($num / 10);
  }
  echo "Reversed number is $rev";
?>
</body>
</html>
```

OUTPUT:**Reverse a Number**

Enter a number:

Reversed number is 45

3.Working with Files (Reading / Writing).**CODE:****HTML CODE:**

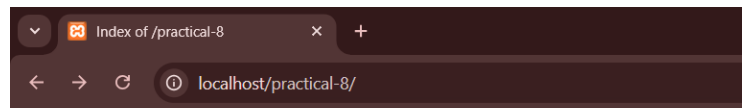

```
<!DOCTYPE html>
<html>
<body>
  <center>
    <table border="1">
      <form method="GET" action="filecreate.php">
        <tr>
          <td style="width:200px" align="center">Enter the file name that you want to
create:</td>
          <td><input type="text" name="txtname"></td>
        </tr>
        <tr>
          <td style="width:200px" align="center">Enter your content:</td>
          <td><textarea name="txtmsg" rows=5></textarea></td>
        </tr>
        <tr>
          <td colspan="2" align="right">
            <input type="Submit" style="color:black" name="btnSubmit" value="Submit">
            <input type="Reset" style="color:red" name="btnReset" value="Reset">
          </td>
        </tr>
      </form>
    </table>
  </center>
</body>
</html>
```

PHP CODE:

```
<!DOCTYPE html>
<html>
<body>
<?php
  $name = $_REQUEST["txtname"].".txt";
  $message = $_REQUEST["txtmsg"];
  $a = fopen($name,"w");
  fwrite($a,$message);
  fclose($a);

  $a = fopen($name,"r");
  while(!feof($a)){
    echo fgets($a);
    echo "<br>";
  }
  fclose($a);
?>
</body>
```

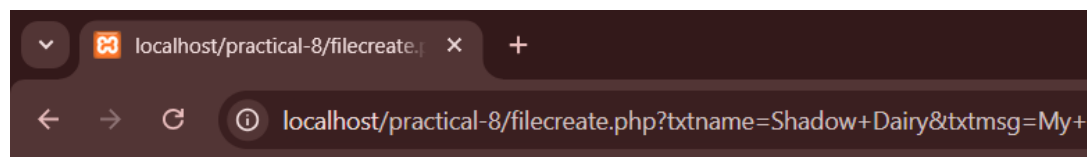

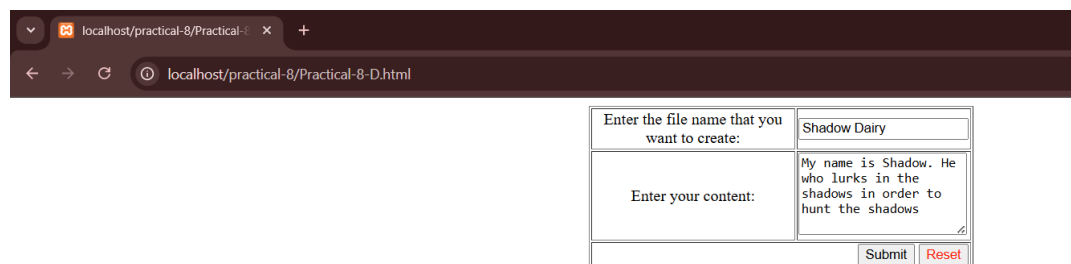

</html>

OUTPUT:

Apache/2.4.58 (Win64) OpenSSL/3.1.3 PHP/8.2.12 Server at localhost Port 80

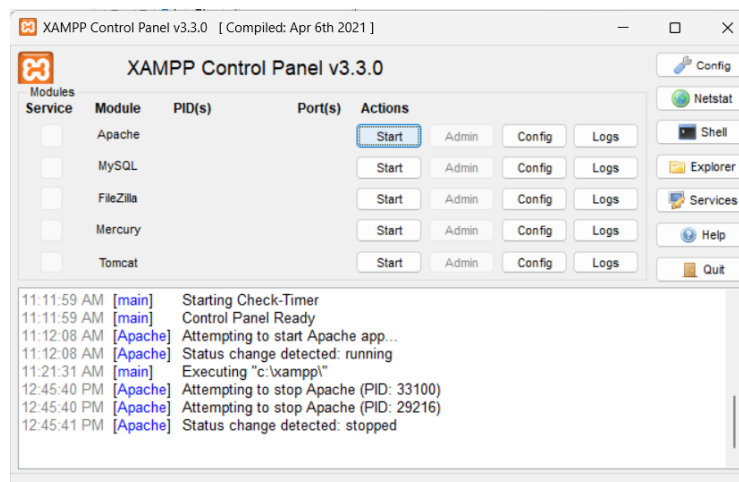

My name is Shadow. He who lurks in the shadows in order to hunt the shadows

Steps for Using XAMPP:

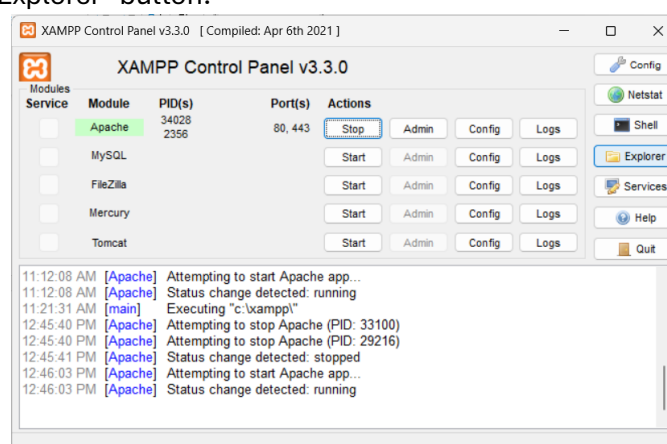

1. Download XAMPP from <https://www.apachefriends.org/>

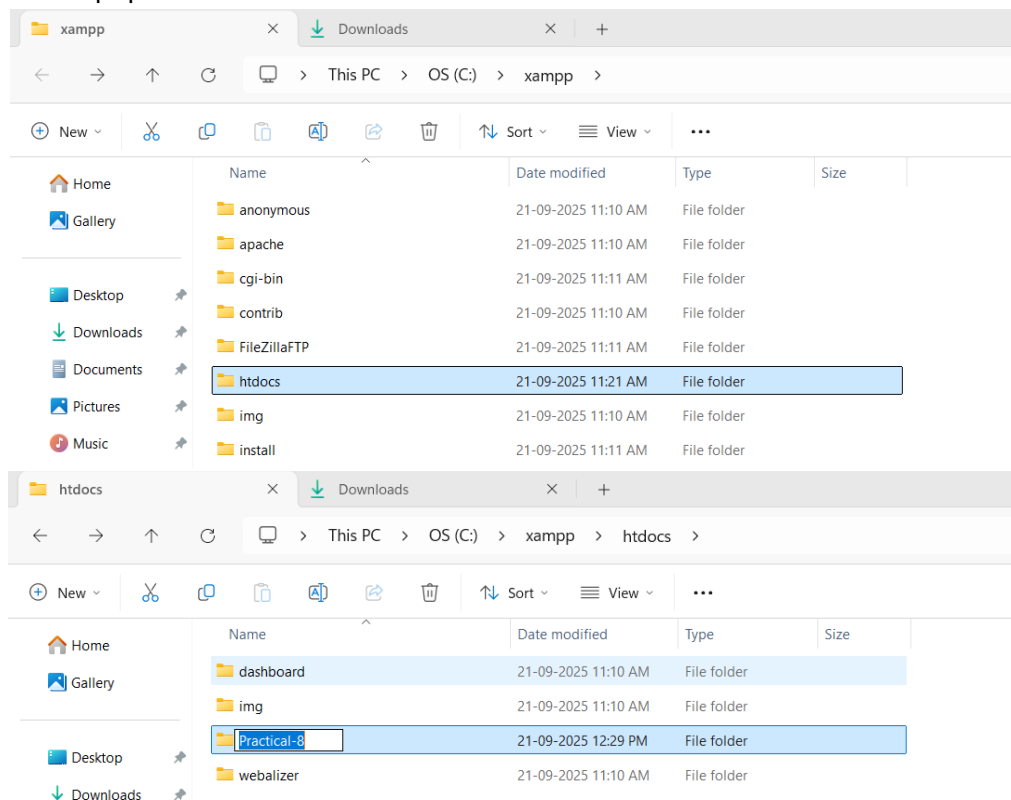

2. Start XAMPP and then click on “start” button in actions for the Apache.

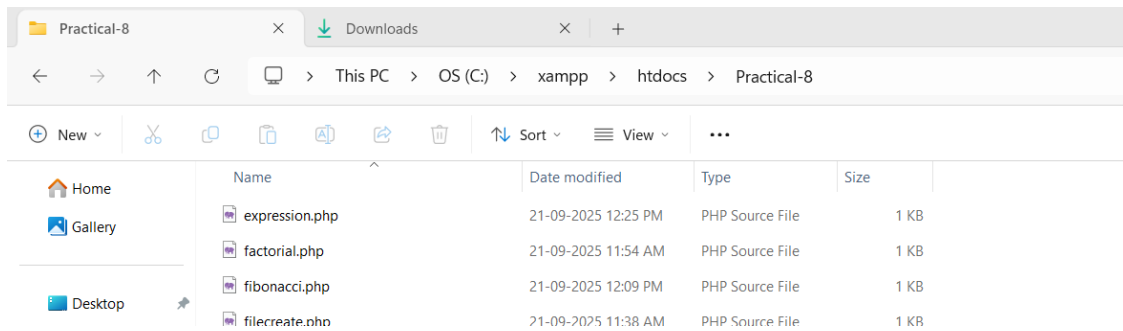

3. Then click on the “Explorer” button.

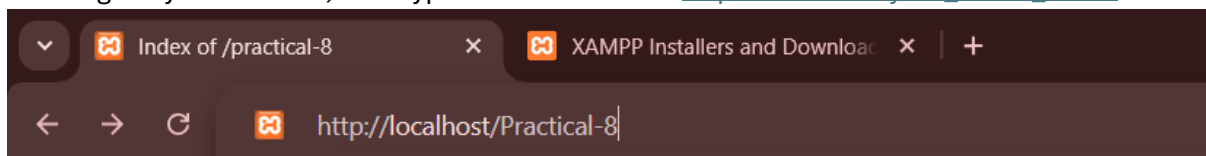

4. Then go to the htdocs folder and then create a folder of your name (Ex: XAMP CODES) so that your html and php code will be saved in that folder.

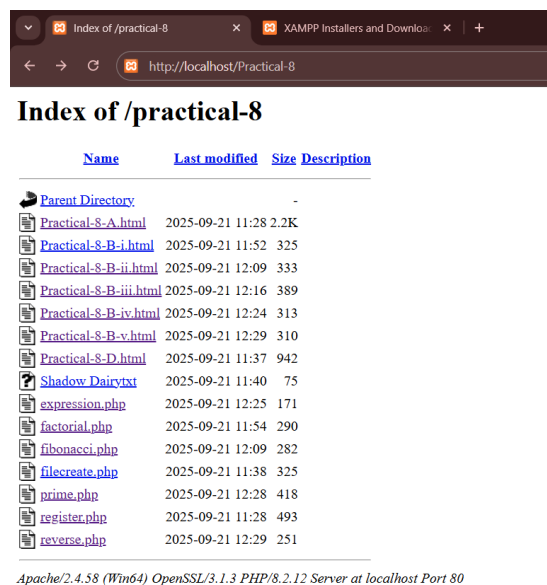

5. Open Notepad and write a html or php code and then save it to the folder(XAMP CODES) that you have created in the htdocs folder.

6. Then go to your browser, then type in the URL that is http://localhost/your_folder_name

7. Then select the file you want to run.

8. To stop the Apache just press “stop” button in actions.
