

Aim: Create an Android application to demonstrate XML based animation.

MainActivity.kt CODE:

```
package com.rohit.practical6a
import android.os.Bundle
import android.view.animation.Animation
import android.view.animation.AnimationUtils
import android.widget.Button
import androidx.appcompat.app.AppCompatActivity
class MainActivity : AppCompatActivity()
{
    protected override fun onCreate(savedInstanceState: Bundle?)
    {
        super.onCreate(savedInstanceState)
        setContentView(R.layout.activity_main) // loading Animation from
        val animation: Animation = AnimationUtils.loadAnimation(this,
            R.anim.bounce) // getting the Button from activity_main.xml file
        val button: Button = findViewById(R.id.button)
        button.setOnClickListener { // start the animation
            button.startAnimation(animation)
        }
    }
}
```

Activity_Main.xml CODE:

```
<?xml version="1.0" encoding="utf-8"?>
<RelativeLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".MainActivity" android:orientation="vertical">
    <Button
        android:id="@+id/button"
        android:layout_centerInParent="true"
        android:background="@color/colorPrimary"
        android:textColor="#ffffff"
        android:text="Let's Bounce"
        android:layout_width="200dp"
        android:layout_height="80dp"/>
</RelativeLayout>
```

Bounce.xml CODE:

```
<?xml version="1.0" encoding="utf-8"?>
<set
    xmlns:android="http://schemas.android.com/apk/res/android"
    android:fillAfter="true"
    android:interpolator="@android:anim/bounce_interpolator">

    <scale
        android:pivotX="50%"
```

```
        android:pivotY="50%"
        android:fromXScale="0.5"
        android:toXScale="1.0"
        android:fromYScale="0.5"
        android:toYScale="1.0"
        android:duration="500"/>
</set>
```

Colors.xml CODE:

```
<?xml version="1.0" encoding="utf-8"?>
<resources>
    <color name="colorPrimary">#6200EE</color>
</resources>
```

OUTPUT:
