

Aim: A. Write and test a java program to display the total number of links on a page.

HTML CODE:

```
<!DOCTYPE html>
<head><title>Links</title></head>
<body>
    <a href = "https://www.netflix.com/in/">Netflix</a><br>
    <a href = "https://www.flipkart.com/">Flipkart</a><br>
    <a href = "https://store.steampowered.com/">Steam</a><br>
    <a href = "https://store.epicgames.com/en-US/">Epic</a><br>
    <a href = "https://www.amazon.in/">Amazon</a><br>
</body>
</html>
```

OUTPUT:

Java CODE:

```
package setcodes;
import org.openqa.selenium.By;
import org.openqa.selenium.WebDriver;
import org.openqa.selenium.WebElement;
import org.openqa.selenium.firefox.FirefoxDriver;
import org.openqa.selenium.remote.DesiredCapabilities;
import java.util.*;

public class SETCODES{
    static String dpath = "geckodriver.exe";
    public static WebDriver driver;
    public static void main(String[] args){
        System.setProperty("webdriver.gecko.driver", dpath);
        DesiredCapabilities cap=DesiredCapabilities.firefox();
        cap.setCapability("marionette", true);
        driver = new FirefoxDriver(cap);
        driver.get("http://localhost/SET/Links.html");
        driver.manage().window().maximize();

        java.util.List<WebElement>links = driver.findElements(By.tagName("a"));
        System.out.println("Total no of links = " + links.size());
        System.out.println("Name of the links are: ");
        for (int i=0;i<links.size();i++){
            System.out.println("Link name is: " + links.get(i).getText());
        }
    }
}
```

OUTPUT:

The screenshot shows two windows. The top window is the 'Output - SETCODES (run)' console, which displays the following text: 'Total no of links = 5', 'Name of the links are:', 'Link name is: Netflix', 'Link name is: Flipkart', 'Link name is: Steam', 'Link name is: Epic', 'Link name is: Amazon', and 'BUILD SUCCESSFUL (total time: 3 seconds)'. The bottom window is a web browser with a single tab titled 'Links'. The address bar shows the URL 'http://localhost/SET/Links.html'. The browser content area displays a list of five underlined links: 'Netflix', 'Flipkart', 'Steam', 'Epic', and 'Amazon'.

```
Output - SETCODES (run) x
Total no of links = 5
Name of the links are:
Link name is: Netflix
Link name is: Flipkart
Link name is: Steam
Link name is: Epic
Link name is: Amazon
BUILD SUCCESSFUL (total time: 3 seconds)

Links
http://localhost/SET/Links.html
Netflix
Flipkart
Steam
Epic
Amazon
```
